AUTHOR Losee, Robert M., Jr.
TITLE A Selective Bibliography of Commercial Radio and Television Engineering.
INSTITUTION EBR Press, Shorewood, Wis.
PUB DATE 75
NOTE 36p.

EDRS PRICE MF-$0.76 HC-$1.95 PLUS POSTAGE
DESCRIPTORS *Bibliographies; *Commercial Television; Electronics; Engineering Technology; Guides; Literature Reviews; Mass Media; *Media Research; *Media Technology; *Radio Technology; Video Equipment

ABSTRACT

A selective bibliography of materials published in the area of commercial radio and television engineering covers relevant areas as well as some described as peripheral including lighting, management, and microwave transmission theory. Reference materials are grouped alphabetically by case studies, circuits, current awareness services, dictionaries, polyglot dictionaires, directories, electronic components data, encyclopedias, filmstrips, government publications, guides, handbooks, manuals, motion pictures, papers, serials, servicing manuals, standards and specifications, study guides, substitution handbooks and yearbooks. TABLE OF CONTENTS

2 Table of Contents

3 Introduction

4 Case Studies

5 Circuits

6 Current Awareness Services

7 Dictionaries

8 Polyglot Dictionaries

9 Directories

10 Electronic Components Data

11 Encyclopedias

12 Filmstrips

13 Government Publications

14 Guides

16 Handbooks

21 Manuals

27 Motion Pictures

28 Papers

29 Serials

30 Servicing Manuals

32 Standards and Specifications

33 Study Guides

34 Substitution Handbooks

35 Yearbooks

PREFACE

This is a bibliography of many different forms of reference materials which have been published in the area of Commercial Radio and Television Engineering. It is selective in that it tries to have only a few books on any one topic—thus only a few of the oodles of introductory texts on transistors have been included. The author has made an effort to include materials in areas somewhat relevant to engineering which might be considered peripheral such as lighting, management, microwave transmission theory, etc. Too much depth in certain areas has also hopefully been avoided—for example, little depth is given in a field such as radar as materials in this case would only be used in cases of radar interference and UHF or SHF transmission techniques.

The author wishes that anyone having comments, corrections, or anything else would contact him at:
